

## Sniff Scope Installation Guide

An educational network & DNS Traffic viewer for Windows, built for learning network discovery and traffic analysis in authorized labs.

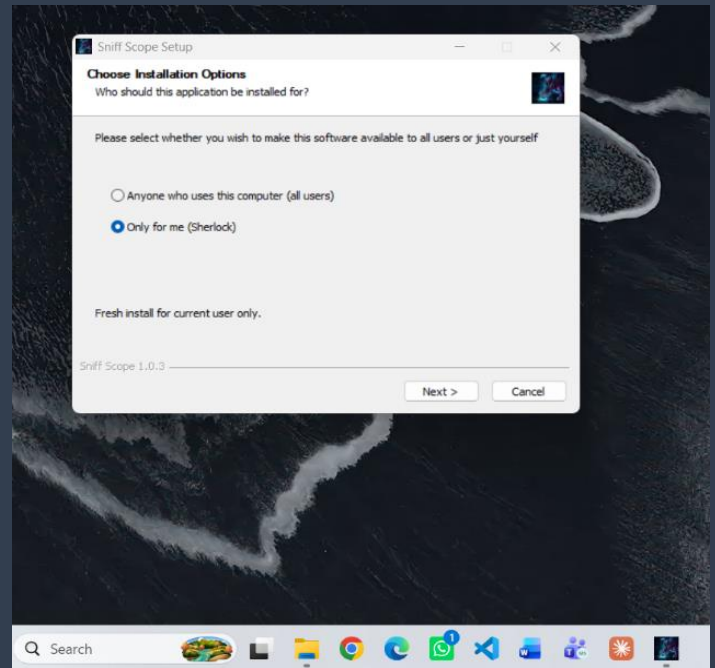

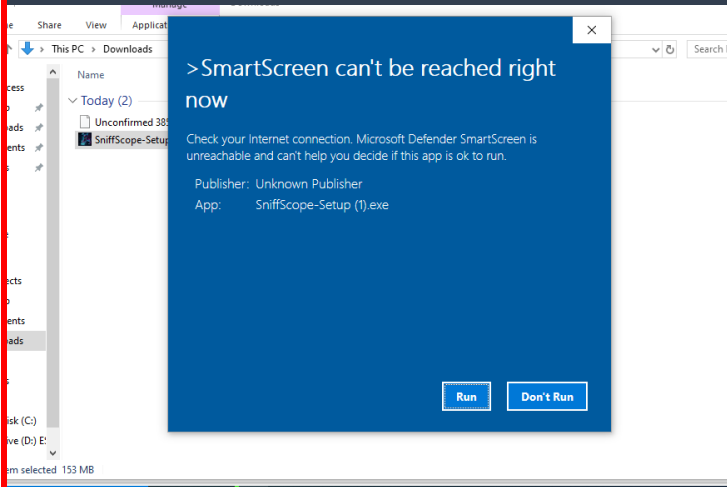

- **Sniff Scope is a Windows desktop application for studying network discovery and traffic analysis in authorized labs.**
- Prerequisite [ Npcap (`npcap.exe`; official downloads may use a versioned name such as `npcap-1.89.exe`)].
- 1. Download `SniffScope-Setup.exe` from this repository's GitHub Releases
- It may asked for unverified....Download unverified file or accept permission

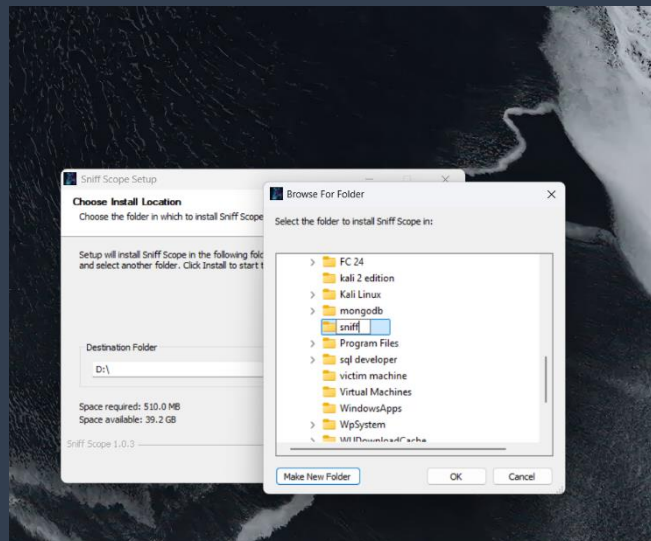

- Run the setup

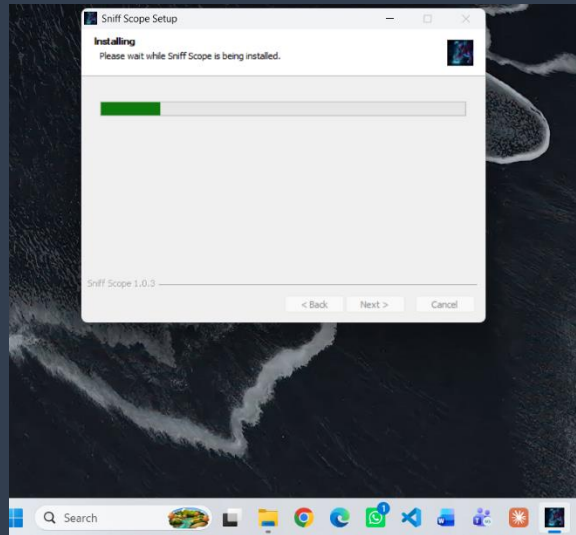

- Select the user and then next

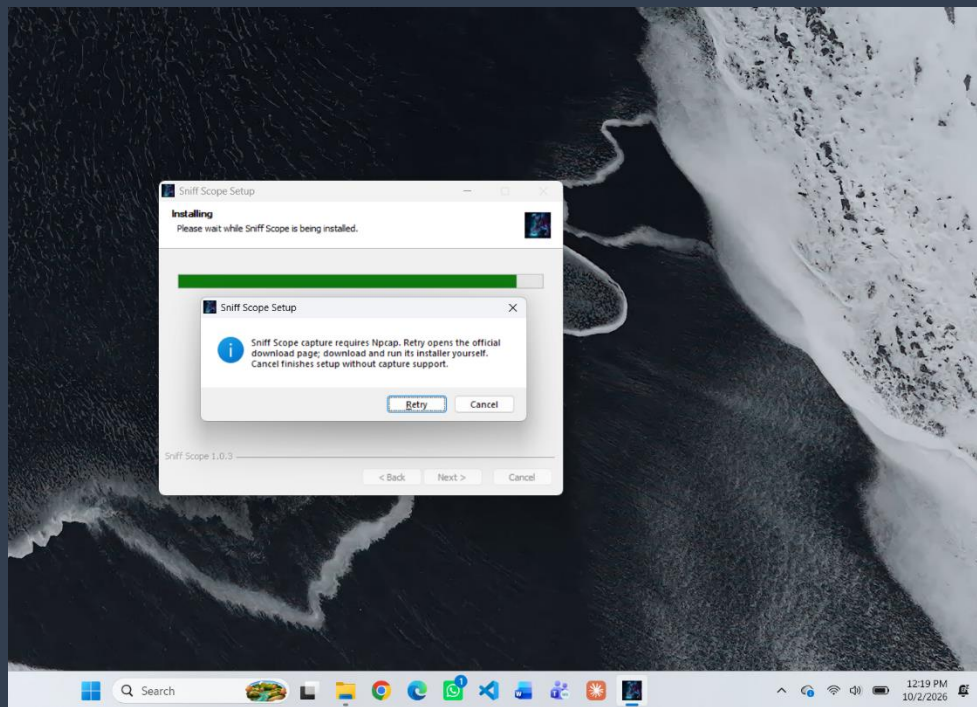

- Select the Directory where you want to install or the leave as default
- Click on Next

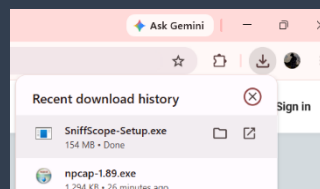

- It may as for npcap as pre requisite of this software

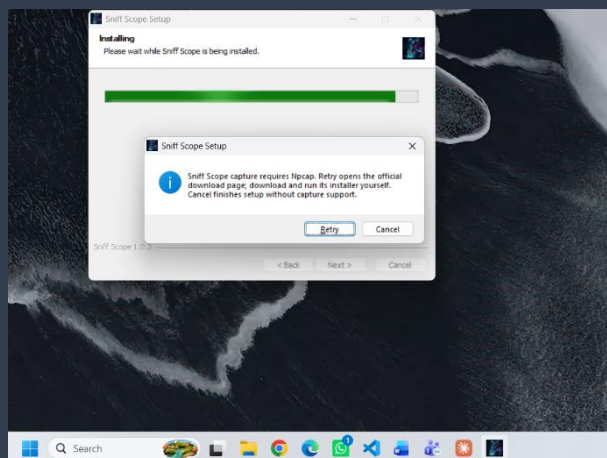

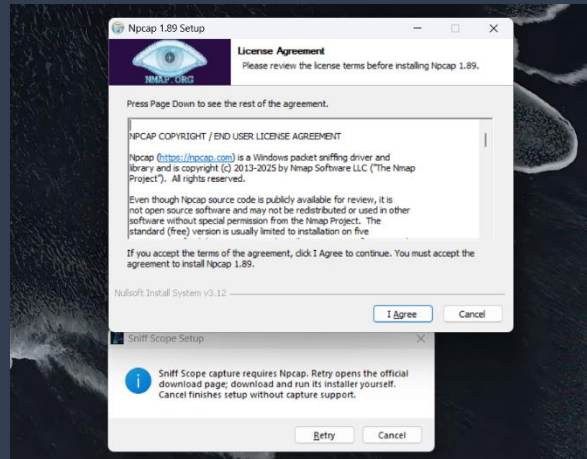

- Download & setup Npcap from official source...you need windows installer

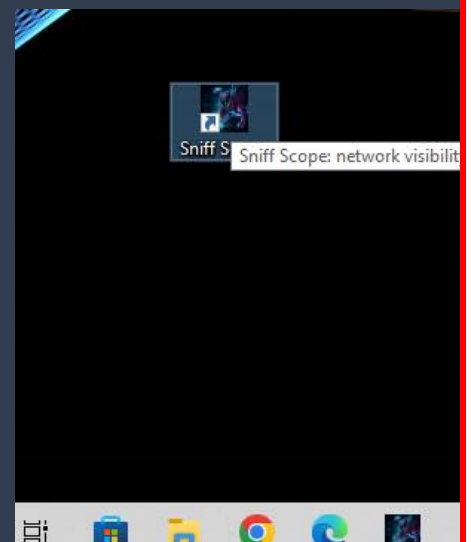

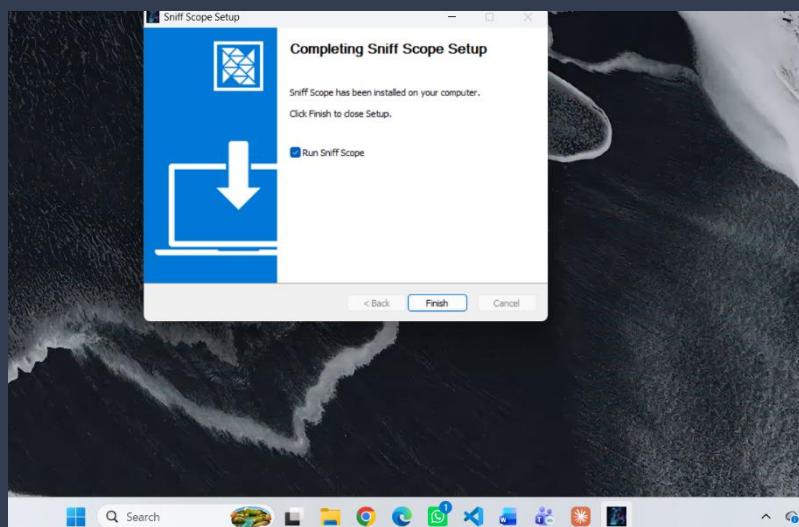

<https://npcap.com/>

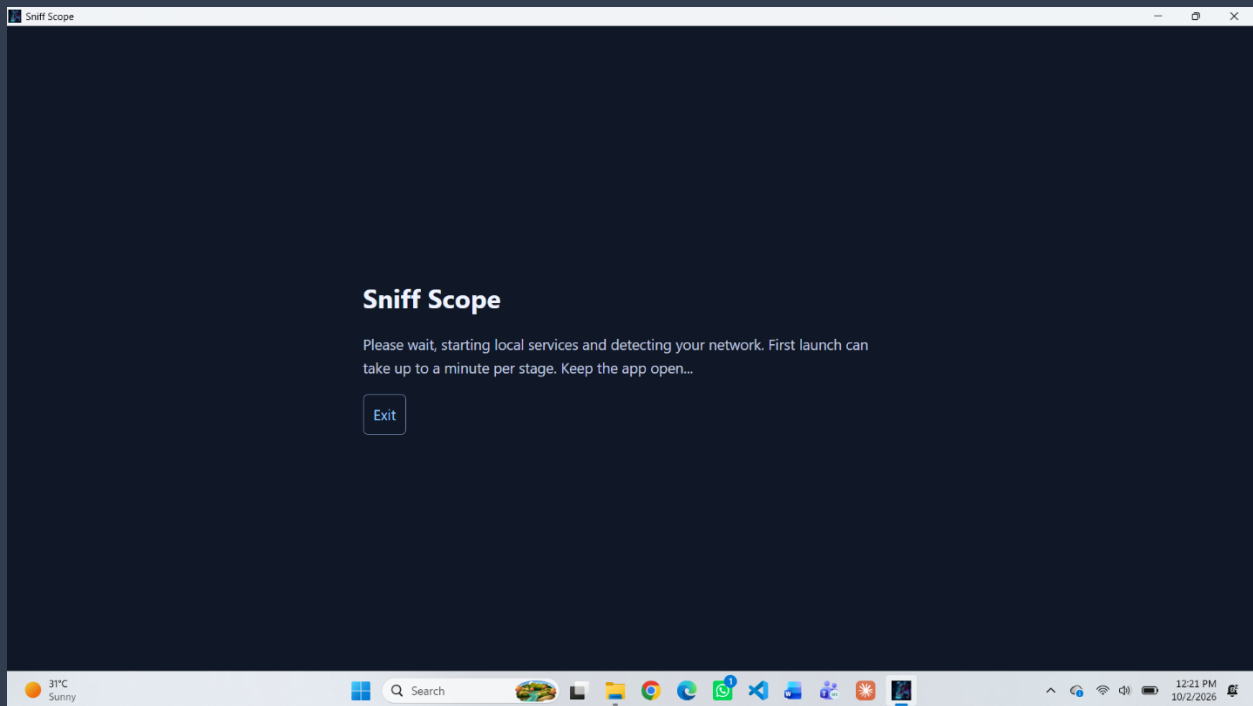

- Right-click the Npcap installer and select **\*\*Run as administrator\*\***. Complete setup and restart Windows if requested.
- Click on retry

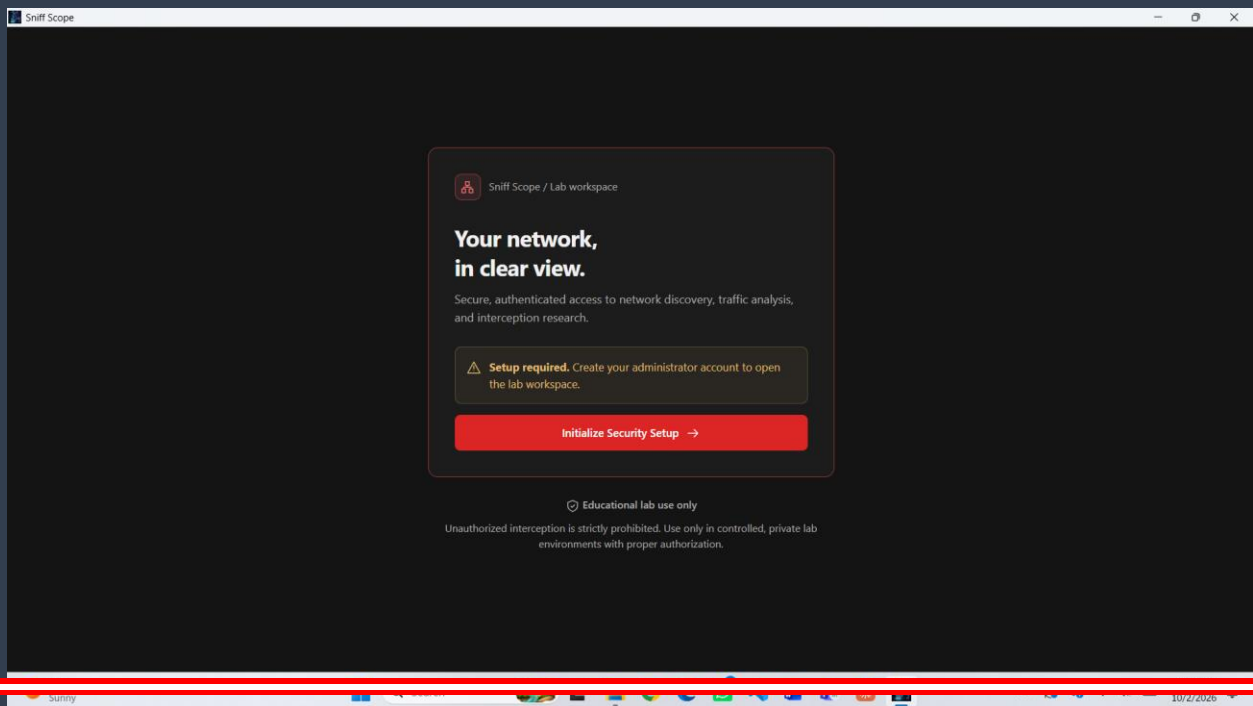

- Click on Finish

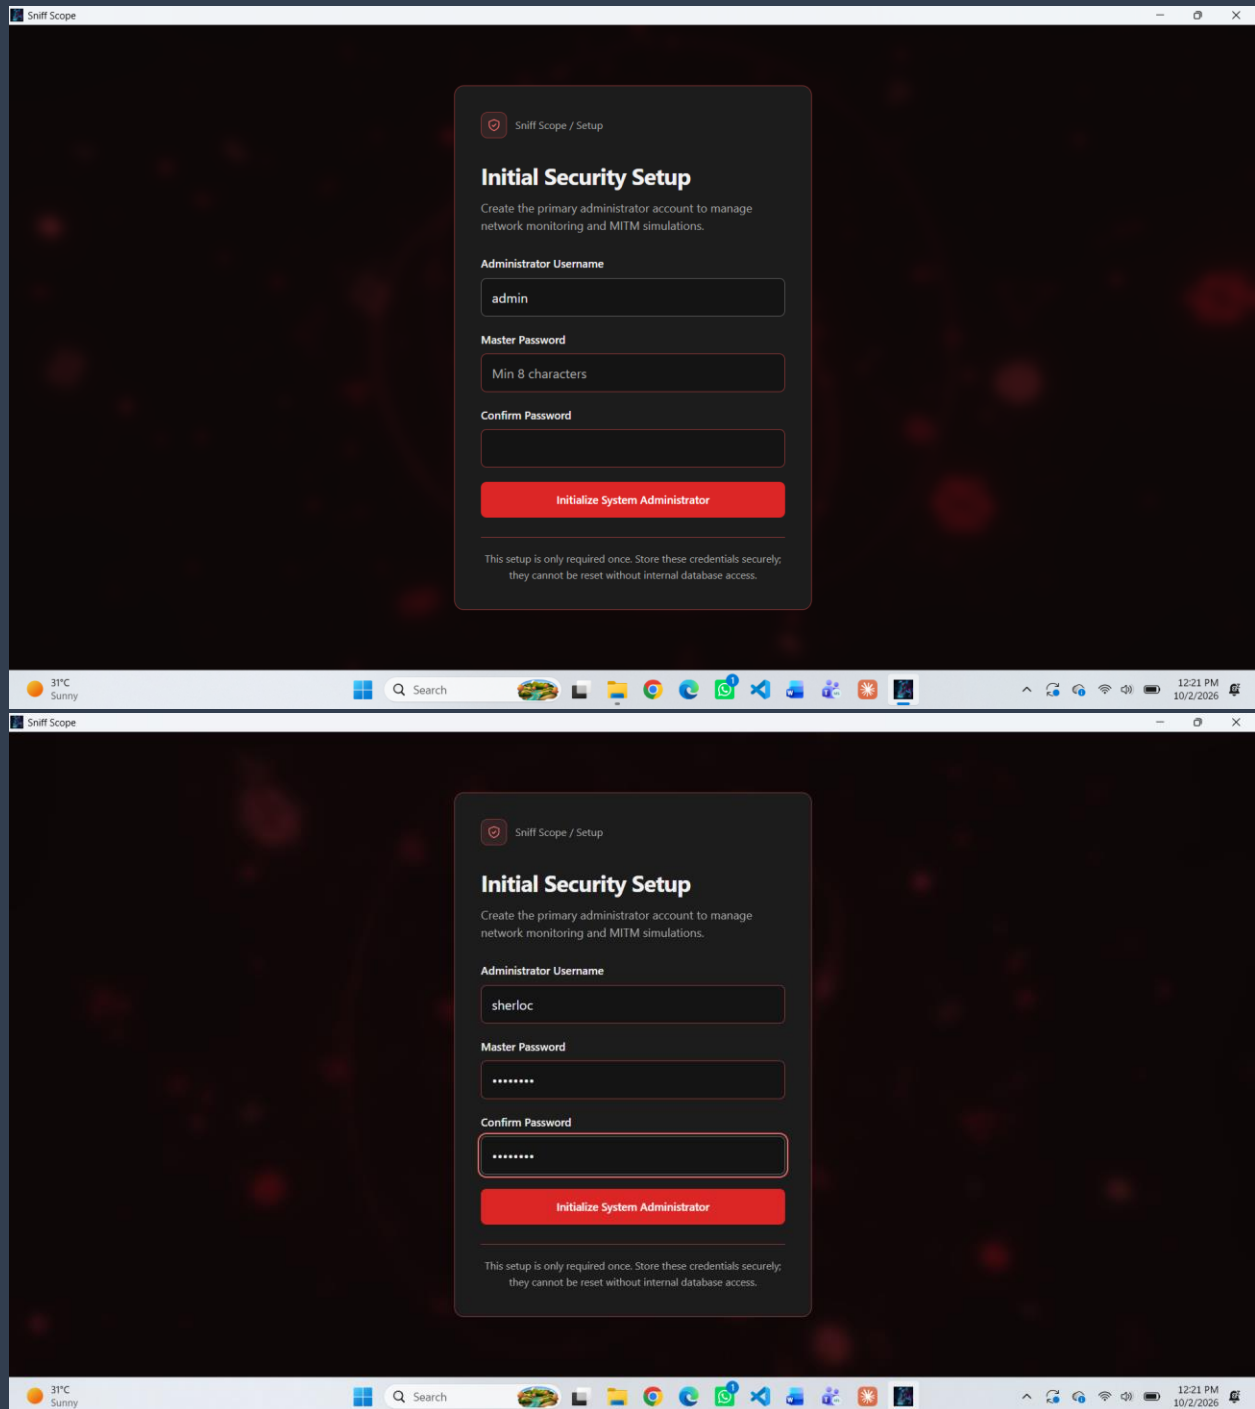

Use SniffScope only on networks and devices you own or have explicit permission to test. Unauthorized interception, surveillance, credential collection, or disruption is prohibited. Users are responsible for complying with applicable laws and network policies. The developers do not authorize misuse. The software is provided without warranty.

Click on Access Command Center

## Choose your name & 8 character password

Sniff Scope / Setup

### Initial Security Setup

Create the primary administrator account to manage network monitoring and MITM simulations.

**Administrator Username**

**Master Password**

**Confirm Password**

**Initialize System Administrator**

This setup is only required once. Store these credentials securely, they cannot be reset without internal database access.

Click on Initialize System Administrator

- Wait For loading your network credentials

LAB ENVIRONMENT - V1.2

# Sniff Scope

Device discovery and traffic analysis for your lab network.

Admin session License Sign Out

Please wait, detecting your network... This can take up to a minute. Keep the app open.

Trigger ARP Scan

## Discovered Assets

|----------------------------------------------------------------------------|---------|--------------|
| No destination packet resolution data available for this specific capture. |         |              |

## APPLICATION PAYLOAD METADATA

No application payload metadata captured for this session.

## ASSESSMENT TELEMETRY

### MITM Session Insights

Latest session

**PROTOCOL ACTIVITY**  
No protocol data yet.

## RECENT MITM SESSIONS

No prior sessions recorded.

**Operational Note:** ARP requests refresh every 2 seconds during an active session. Session history is stored across devices.

## About Sniff Scope

A network analysis tool for discovering devices, inspecting traffic, and studying MITM simulations in authorized lab environments.

Discover devices by IP, MAC address, vendor, and status, then export completed scan results as CSV.

Explore protocol activity, destination hosts, and session history to understand traffic patterns.

2026 — Built by **Maaz Ansari**  
Visit [maazansari.vercel.app](https://maazansari.vercel.app) to connect.

Click on Trigger ARP Scan to get Data of all the Devices in Network with their vendor name, IP& MAC address

The Sniff Scope interface displays network discovery and traffic analysis data. At the top, it shows the current environment: LAB ENVIRONMENT - V1.2. Below this, a search bar contains the text "Smile stay 2nd floor". A red button labeled "Trigger ARP Scan" is visible. The main content area is divided into several sections:

- Discovered Assets:** A table showing one device with IP Address 192.168.18.1, MAC Address 7c:33:f9:61:16:12, Vendor Huawei Technologies Co.,Ltd, Status active, Last Seen 12:22:07 PM, and Role Gateway.
- Traffic Analysis History:** A table showing no traffic intercepted yet.
- DEVICE PROTOCOL MIX:** A section indicating "Waiting for protocol data..." and a displayed capture bandwidth of 0.00 MB.
- INTERFACE:** A section showing the interface name \Device\NPF\_{4EB4AFC8-B9F4-4E21-A894-21CFFF142C3B}.
- Legal Disclaimer:** A warning box stating that the system is for pedagogical research only and improper use may violate network policies and local laws.
- ASSESSMENT TELEMETRY:** A section showing MITM Session Insights, Protocol Activity, and Recent MITM Sessions.

The bottom of the interface shows a Windows taskbar with the date and time 12:22 PM 10/2/2026.

It start discovering devices attached to network

The Sniff Scope interface shows the discovery process in progress. The top section displays the current environment: LAB ENVIRONMENT - V1.2. Below this, a search bar contains the text "Smile stay 2nd floor". A red button labeled "Discovering..." is visible. The main content area is divided into several sections:

- Discovered Assets:** A table showing one device with IP Address 192.168.18.1, MAC Address 7c:33:f9:61:16:12, Vendor Huawei Technologies Co.,Ltd, Status active, Last Seen 12:22:07 PM, and Role Gateway. A red button labeled "SCANNING" is visible.
- Traffic Analysis History:** A table showing no traffic intercepted yet.
- DEVICE PROTOCOL MIX:** A section indicating "Waiting for protocol data..." and a displayed capture bandwidth of 0.00 MB.
- INTERFACE:** A section showing the interface name \Device\NPF\_{4EB4AFC8-B9F4-4E21-A894-21CFFF142C3B}.
- Legal Disclaimer:** A warning box stating that the system is for pedagogical research only and improper use may violate network policies and local laws.
- ASSESSMENT TELEMETRY:** A section showing MITM Session Insights, Protocol Activity, and Recent MITM Sessions.

The bottom of the interface shows a Windows taskbar with the date and time 12:22 PM 10/2/2026.

Here you have the status of all the devices on network

The screenshot shows the Sniff Scope application interface. At the top, it displays 'LAB ENVIRONMENT · V1.2' and 'Sniff Scope' with the tagline 'Device discovery and traffic analysis for your lab network.' There are links for 'Admin session', 'License', and 'Sign Out'. Below this, a status bar shows 'Smile stay 2nd floor', 'Subnet: 192.168.18.0/24', 'Gateway: 192.168.18.1 • Reachable', and 'Host: 192.168.18.18'. A 'Discovering...' button is present, along with the text 'Broadcasting ARP requests...'. The main section is titled 'Discovered Assets' and shows '28 Live' and '28 Total' devices. A progress bar indicates 'Waiting for final replies · 28 devices discovered' and '253 / 253 addresses · 192.168.18.0/24'. A table lists the discovered assets:

| IP Address   | MAC Address       | Vendor                              | Status | Last Seen   | Role    |
|--------------|-------------------|-------------------------------------|--------|-------------|---------|
| 192.168.18.1 | 7c:33:f9:61:16:12 | Huawei Technologies Co., Ltd.       | active | 12:22:29 PM | Gateway |
| 192.168.18.2 | e8:2e:fe:3c:fc:2e | Zhejiang Dahua Technology Co., Ltd. | active | 12:22:29 PM | Client  |
| 192.168.18.3 | e8:2e:fe:2b:f5:ed | Zhejiang Dahua Technology Co., Ltd. | active | 12:22:29 PM | Client  |
| 192.168.18.4 | e8:2e:fe:3c:fe:85 | Zhejiang Dahua Technology Co., Ltd. | active | 12:22:29 PM | Client  |
| 192.168.18.5 | e8:2e:fe:23:4d:a1 | Zhejiang Dahua Technology Co., Ltd. | active | 12:22:29 PM | Client  |

On the right, the 'INTERFACE' section shows the device path '\Device\NPF\_{4EB4AFC8-B9F4-4E21-A894-21CFF7142C3B}'. Below this is the 'RESTRICTED OPERATION' section for 'MITM Interception Control'. It includes fields for 'TARGET DEVICE' (with a 'Select a device' button) and 'NETWORK GATEWAY' (192.168.18.1, 7c:33:f9:61:16:12). A protocol selection area is also present. A 'Begin MITM Interception' button is at the bottom. A legal disclaimer is also shown.

Select the device/user whom you want to sniff and then click on begin MITM(Man in the middle Interception)

The screenshot shows the Sniff Scope application interface after a scan. The 'Discovered Assets' section now shows '32 Live' and '32 Total' devices. A progress bar indicates 'Scan complete · 32 devices discovered' and '253 / 253 addresses · 192.168.18.0/24'. A table lists the discovered assets:

| IP Address    | MAC Address       | Vendor                              | Status | Last Seen   | Role   |
|---------------|-------------------|-------------------------------------|--------|-------------|--------|
| 192.168.18.14 | f8:ce:07:c7:00:10 | Zhejiang Dahua Technology Co., Ltd. | active | 12:30:39 PM | Client |
| 192.168.18.15 | 30:dd:aa:dd:73:4e | Unknown vendor                      | active | 12:30:39 PM | Client |
| 192.168.18.16 | e8:2e:fe:23:36:ea | Zhejiang Dahua Technology Co., Ltd. | active | 12:30:39 PM | Client |
| 192.168.18.17 | 30:dd:aa:dd:73:67 | Unknown vendor                      | active | 12:30:39 PM | Client |
| 192.168.18.18 | cc:47:40:90:ce:8d | AzureWave Technology Inc.           | active | 12:30:39 PM | Client |
| 192.168.18.19 | 84:c5:a6:01:ba:03 | Intel Corporate                     | active | 12:30:39 PM | Client |
| 192.168.18.20 | f2:f8:28:66:53:2d | Private / randomized MAC            | active | 12:30:39 PM | Client |
| 192.168.18.22 | ce:98:e2:d9:b8:f9 | Private / randomized MAC            | active | 12:30:39 PM | Client |
| 192.168.18.23 | 66:db:34:f8:50:88 | Private / randomized MAC            | active | 12:30:39 PM | Client |

On the right, the 'RESTRICTED OPERATION' section for 'MITM Interception Control' is updated. The 'TARGET DEVICE' field now shows '192.168.18.18' with MAC 'cc:47:40:90:ce:8d'. The 'NETWORK GATEWAY' remains '192.168.18.1' with MAC '7c:33:f9:61:16:12'. A message states: 'Target identification complete. Click below to begin ARP poisoning and traffic interception. All data will be logged for educational analysis.' The 'Begin MITM Interception' button is still present. A legal disclaimer is also shown.

Below the MITM section, there is an 'ASSESSMENT TELEMTRY' section for 'MITM Session Insights'. It shows 'Latest session' and 'PROTOCOL ACTIVITY' with the text 'No protocol data yet.'

On right side, You will see captured IP address with their domain translation

The screenshot shows the Sniff Scope application interface. At the top, there's a list of active devices with columns for IP, MAC, Vendor, Status, Time, and Client. Below this, a 'Traffic Analysis History' section shows a table with Time, Packets, and Volume. A session at 12:33:31 PM is selected, showing 4016 packets and 1384.00 KB. To the right, a 'DEVICE PROTOCOL MIX' chart shows TCP (3478), UDP (522), and ICMP (16). Further right, a list of domains and their corresponding IP addresses is shown, including www.googleadservices.com, 35.190.43.134, and others.

| IP           | MAC               | Vendor                              | Status | Time        | Client |
|--------------|-------------------|-------------------------------------|--------|-------------|--------|
| 192.168.18.6 | e0:2e:fe:3d:00:c5 | Zhejiang Dahua Technology Co., Ltd. | active | 12:30:39 PM | Client |
| 192.168.18.7 | e0:2e:fe:23:4d:9d | Zhejiang Dahua Technology Co., Ltd. | active | 12:30:39 PM | Client |
| 192.168.18.8 | e0:2e:fe:3c:fc:47 | Zhejiang Dahua Technology Co., Ltd. | active | 12:30:39 PM | Client |

| 12:33:28 PM | 192.168.18.1 → 192.168.18.18 | IP       | 56 bytes<br>[encrypted or non-HTTP payload omitted] |

RECENT MITM SESSIONS

- 192.168.18.18 (10/2/2026, 12:32:00 PM) COMPLETED
- 192.168.18.8 (10/2/2026, 12:31:07 PM) COMPLETED
- 192.168.1.14 (10/1/2026, 6:58:03 AM) COMPLETED
- 192.168.1.14

Operational Note: ARP requests refresh every 2 seconds during an active session. Session history is stored across devices.

About Sniff Scope

A network analysis tool for discovering devices, inspecting traffic, and studying MITM simulations in authorized lab environments.

Discover devices by IP, MAC address, vendor, and status, then export completed scan results as CSV.

Explore protocol activity, destination hosts, and session history to understand traffic patterns.

## Here you can inspect Application Payload data (Also HTTP Payload Data)

The screenshot displays the Sniff Scope application interface. On the left, a list of discovered devices is shown with their IP addresses and source status. The main panel, titled 'APPLICATION PAYLOAD METADATA', contains a table of network traffic flows. The right sidebar provides additional context, including an operational note about ARP requests and a description of the tool's capabilities.

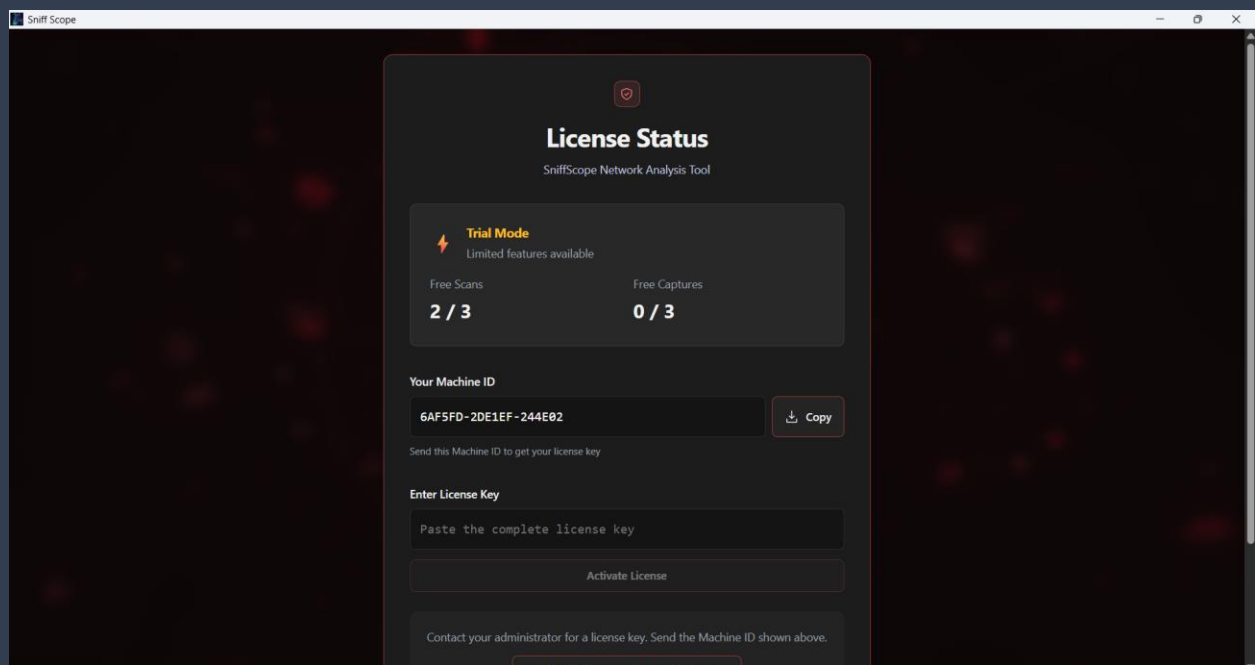

| Time        | Flow                         | Protocol | Payload                                             |
|-------------|------------------------------|----------|-----------------------------------------------------|
| 12:33:28 PM | 192.168.18.1 → 192.168.18.18 | IP       | 56 bytes<br>[encrypted or non-HTTP payload omitted] |
| 12:33:26 PM | 192.168.18.1 → 192.168.18.18 | IP       | 56 bytes<br>[encrypted or non-HTTP payload omitted] |
| 12:33:21 PM | 192.168.18.1 → 192.168.18.18 | IP       | 56 bytes<br>[encrypted or non-HTTP payload omitted] |
| 12:33:19 PM | 192.168.18.1 → 192.168.18.18 | IP       | 56 bytes<br>[encrypted or non-HTTP payload omitted] |

In middle It may ask some permission, Make sure You are authorize to do any stuff

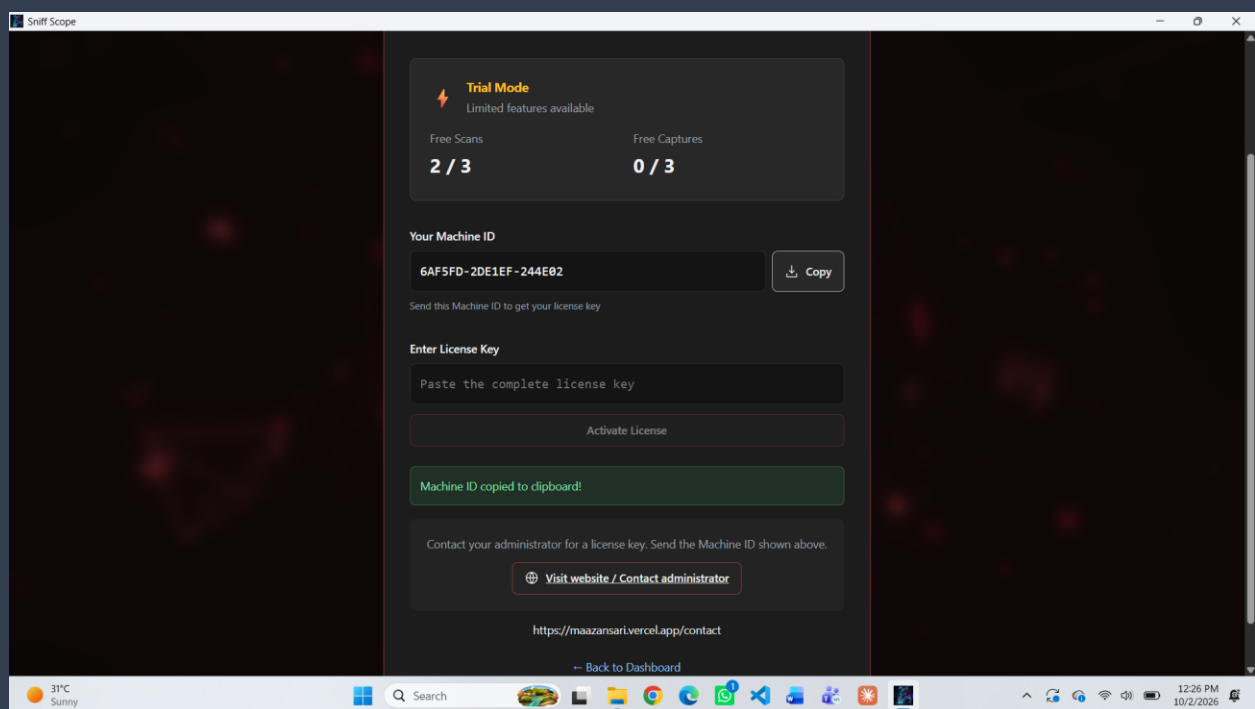

This screenshot shows the Sniff Scope interface with a 'Discovered Assets' table and a 'MITM Interception Control' panel. A modal dialog box is open, asking for permission to start a MITM simulation. The interface also includes a 'Trigger ARP Scan' button and a 'Begin MITM Interception' button.

| IP Address    | MAC Address       | Vendor                              | Status | Time        | Role   |
